

Specialisation Cheat Sheet by Natalie Moore (NatalieMoore) via cheatography.com/19119/cs/2202/

Theory of absolute advantage

Countries can produce some goods more effectively and efficently than others.

Theory of comparative advantage

Free trade can increase global output even if one country has an absolute advantage in the production of all products

Trade pattern theories

Theory Large depend on export Russia,
of less than small. Large = USA,
country varied climates and Brazil,
size more resources, so India,
more self sufficent. China
are
large

Size of economy

Developed countries more likely to trade. Top 10 export/importers developed countries. Developed economies produce more so have more to trade, incomes are high so people buy more.

With whom trade theories

CountryDeveloped trade mostly with
Similarity eachother because they theory produce and consume more,
create new products to
compete, produce differentiated
products and services

Specialisatio n and aquired advantage Provide other countires an advantage over domestic producers. Specialise to grain advantage, eg Germany = machinery & equip

Product differntiation

Cultural Importers and expoerters find it similarity easier to trade with countries they are similar to in language and or culture

Political May discourage or encourage relationships / economic agreements

Transport costs

Overcoming distance

Full Everyone who wants a job has employment Minimisation of real and Economic efficiency opportunitiy costs of production by exploiting comparative advantages rather than nessessarily absolute advantages Division of Ops for gains: resource owners gains benefit by sale of one output for other, more highly valued goods. Two Simplified version of reality countries, two commoditie Transport Reduce the benefits of costs specialization Statics and Relative conditions in a country dynamics change Production bits of products made in different networks countries Assume resources can move Mobility domestically to where they are needed. Not always valid.

Specialisation assumptions (valid?)

International PLC Theory

Introduction	Growth	Maturity	Decline
In innovating	In innovating and	Multiple countries	
country.	industrial		countries
	countries	Growth in	Some developing
Some exports.			exports
	Shift in export as	decrease in	
Near monopoly	foreign productio	ndustrial	Demand declining
	ramps we	Stable demand	
Sales re: unique		#comp decreases	Price is key Industry
not price	Fast growing		# of producers
	demand. # of com	Price is important	decline
Short prod pans.		Price is important	decline
Evolving	comp price cut.	Long prod runs	Unskilled labour on
methods.		ising high \$\$	long production runs
Z	Decoming	prod high stoodard	iong production runs
high labour	standardised	prod mgm stated at	-
input y capital	\$\$ capital increas	Less labour skill	Profit
	prod standardises	needed	Profit

Free trade results in

Specialisation - Soil, natural resources, fish natural in seas, minerals, wildlife, advantage rainforests

Specialisation - Product or process aquired technology advantage

Specialisation Cheat Sheet by Natalie Moore (NatalieMoore) via cheatography.com/19119/cs/2202/

Free trade results in (cont)

Increased efficency

Increased global output

What type of products are traded

l		
	People and land	Countries with high people to land ratio trade labor with wheat and wool for example
	Manufacturi ng locations	Places which need lots of room manufacture inplaces where there is a lot of room.
	Capital, labor rates and specialisati on	Production factors are not homogenous, vary within and among countries coz of training/edu differences
	Process tech (FP theory results varied)	Companies may substitute capital for labour, depending on the cpst of each.
	Product	New products req \$\$\$ in R & D

According to the factor proportions (FP) theory - factors in abundance are cheaper than factors in scarcity. Assumes homogenity in countries.

countries

Production possibilities curve

Graphical representation of alt combinations of goods and services an economy can produce.

An economy's factors of production are scarce; they cannot produce an unlimited quantity of goods and services.

Importing and exporting probs

Financial risks	Most SMEs site 'shortage of working capital to finance export' as big barrier. Offers low profitability in light of unexpected costs and unknown financial constraints
Customer management	With high speed connections customers want immediate answers.
Scant IB expertise	Difficulties of understanding foreign business practices. Limited knowledge of competitors, unfamiliarity with local customs etc
Marketing barriers	High shipping costs / logistic demands, difficulty price matching & promoting.

Discouraging for exporters.

Importing and exporting probs (cont)

Top management commitment	International outlook and risk orientation. Most focus on domestic rather than foreign. Exporting and importing places tough demands on mgmt. Firms with agarness and surplus resources to trade internationally are rare.
Trade regulation	Inefficencies due to delays, documents and admin fees. Regulations differ from one country to the next.Homeland security also can be a problem.
Trade documentatio n	Lots of it. Including: duty rates, customs clearance and entry processes. Values declarations, dute management,. Mistakes spawn costs and it can get \$\$\$ to manage

Why import?

Specialisation of labour

Global rivalry

Local unavailablity

Diversification

Top managements outlook

tech

By Natalie Moore (NatalieMoore) cheatography.com/nataliemoore/

so most come from developed
